

Dreuw & Deselaer's Poster

The defining feature of this academic conference poster template is its dark grey color scheme and distinct boxes for each section of your research.

The template contains extensive examples of typical content found in a conference poster.

Description

This academic conference poster template features a dark grey color scheme with a series of boxes in light grey to showcase individual parts of your research. A large title section at the top clearly shows your research topic, authors and affiliations, along with an institution logo. The footer can then be used for further research or conference information.

What Is LaTeX?

poster, starting with research objectives and an introduction to the area, then moving on to materials and methods, then through to results and finally to conclusions and references. Each section (box) is populated with example content relevant to the section, so examples of figures, tables, mathematics and different ways of laying out text show you different ways to display your research results.

Usage Guide

[Newest Templates](#)[LaTeX Typesetting Service](#)

Compilation

This template compiles with standard pdflatex and is bundled with several sty files required for its compilation. The bibliography needs to be compiled with the bibtex engine.

Poster Size

The poster defaults to the standard poster size of A0, but if you wish to change this, find the `size` parameter at the start of the template and change its value from `a0` to, for example, `a1` for A1 paper size.

Changing the Logo

The logo at the top right of the poster is automatically pulled in from logo.pdf in the Figures folder with the template. To change this to your own logo, delete logo.pdf and add your own logo to the same folder with the filename logo. You can use any common image extension and it will work: .jpg, .png, .pdf. If you want to do something more complex such as adding multiple logos, you will need to edit the beamerthemel6pd2.sty

to make your changes.

Fitting Your Content

After you have populated the template with your content, you may find that there is too much of it and it goes off the bottom of the poster, or there is too little and there is a big ugly gap at the bottom. To remedy this, change the `scale` parameter value at the top of the template to scale the content as needed. It's recommended that you make sure to balance the columns first, so the layout looks neat.

Portrait or Landscape Layout

The template defaults to a portrait layout with 2 columns of content. You may wish to produce a landscape poster with more columns instead. To do this, change the `orientation` parameter at the top of the template to `landscape`. Then, find the various `column` environments through the template and modify their widths and add new columns as needed.

Bibliography

The template comes with an example bibliography contained in a file called

poster automatically using the bibtex engine. You may wish to use the biber engine instead, in which case you should load the biblatex package and specify the biber engine. You may also wish to simply produce a bibliography manually, in which case you can use lists or simply text to style your references as you want.
