

Alert Sign

This sign template is designed to alert the viewer of an important threat or notice. It is best suited to warning, danger or caution signs due to its bold design and large font sizes. Instruction text at the bottom of the sign provides an optional place for a description or call to action.

Description

This sign template is designed to alert the viewer of an important threat or notice. It does this with a large red heading at the top which draws immediate attention. Due to this, the sign is best suited to warning, danger or caution signs. The main message of the sign is in all caps in a large bold font to enable quick communication at a glance. Finally, the information text at the bottom of the sign provides an

Usage Guide

[Newest Templates](#)[LaTeX Typesetting Service](#)

Compilation

This template compiles with standard pdflatex. There are no special requirements outside of packages that are supplied with a full distribution of TeX.

Sign Content Commands

Several custom commands are present in the template for outputting the three parts of the sign.

`\alertheading` This command takes a single parameter for the top alert heading, automatically capitalized. Commonly used values include: caution, danger, notice, warning, restricted, alert, stop and beware. The text you enter will split to new lines if it is too long, but it is not recommended to have more than two lines for this text.

`\alerttext` This command takes the main message of the sign in its single parameter. The text you enter will be automatically capitalized and you may specify new lines manually with the standard `\\`.

instruction text on the bottom of the sign. Text entered will be italicized automatically. You may specify new lines manually with the standard `\` . Leave this command empty (i.e. `\instructiontext{ }`) if this text is not required.

Sign Settings Commands

Custom commands are present in the template for specifying the font sizes of the three sign elements. It is important to choose the correct size for your sign text in order to make the sign stand out effectively.

`\alertheadingfontsize` This command (length) sets the font size of the top alert heading, specified in points, e.g. 80pt. This should be a large value to draw the viewer's eye to the sign.

`\alerttextfontsize` This command (length) sets the font size of the main alert text, specified in points, e.g. 70pt.

`\instructiontextfontsize` This command (length) sets the font size of the instruction text at the bottom of the
