

# Information Sign

This sign is best suited to displaying an informative message to the viewer. The friendly green heading at the top and serif font act to be a friendly guide to provide information or simple instructions. Additional text on the bottom of the sign provides an optional place for a further description, instructions or sign authorship.

## Description

This sign is best suited to displaying an informative message to the viewer. It does this by using a friendly green box at the top which draws notice, but not in the same way as a danger sign. The main message of the sign is set in a serif font in sentence case, which further gives a casual feel to the sign. Finally, the additional text at the bottom of the sign acts as a place for a further description,

## Usage Guide

[Newest Templates](#)[LaTeX Typesetting Service](#)

### Compilation

This template needs to be compiled with XeLaTeX due to the custom fonts it uses.

It contains a line in the header that should make this happen automatically, but if it doesn't for you, set your LaTeX editor to compile with XeLaTeX each time you open the template.

Alternatively, if you compile via the command line, use the `xelatex` command instead of `pdflatex`.

### Sign Content Commands

Several custom commands are present in the template for outputting the three parts of the sign.

`\informationheading` This command takes a single parameter for the top sign heading, automatically capitalized. The text you enter will split to new lines if it is too long, but it is not recommended to have more than three lines for this text.

`\informationtext` This command takes the main message of the sign in its single parameter. The text you enter will

standard `\`.

Newest Templates

LaTeX Typesetting Service

`\additionaltext` This command takes a single parameter for the additional instructions text at the bottom of the sign. Text entered will be italicized automatically. You may specify new lines manually with the standard `\`. Leave this command empty (i.e. `\additionaltext{}`) if this text is not required.

## Sign Settings Commands

Custom lengths are present in the template for specifying the font sizes of the three sign elements. It is important to choose the correct size for your sign text in order to make the sign stand out effectively.

`\informationheadingfontsize`

This command (length) sets the font size of the top sign heading, specified in points, e.g. 70pt. This should be a large value to draw the viewer's eye to the sign.

`\informationtextfontsize` This

command (length) sets the font size of the main sign text, specified in points, e.g. 58pt.

If you wish to change the color of the green box at the top of the sign, find the definition of the

`headingbackground` color in the

SIGN SETTINGS block in the template and change the the RGB values to change the color.
