

Frequently Asked Questions

This template provides an easy framework for creating a frequently asked questions (FAQ's) document. The first page features a large title followed by a subtitle and list of all questions. Questions are clearly displayed in colored boxes with answers after them in plain text. Each question can contain a unique label to allow referencing it in future questions via links. Questions are also automatically numbered and this number can be referred to at any point.

How do I add a new question and answer?

In the code, type:

```
\question{A question that needs answering}\label{question-label}

The answer to this question.
```

Why is there a label in the code for the previous question?

This is not necessary, but it does give you a way of linking to a different question. In order to another question you simply need to add the following:

```
\hyperref[question-label]{click here}
```

The first part `{question-label}` is the label name and the second part `{click here}` text that is displayed as link.

How do I change the title and subtitle?

To change the main title, simply find the "TITLE AND LIST OF QUESTIONS" block and "A Template for FAQ's" within it. To change the subtitle find the following command:

```
\newlistof{questions}{faq}{\large List of Frequently Asked Questions}

and replace the subtitle with one of your choosing.
```

Is it possible to change the spacing between the questions in the list of questions?

Yes, simply find the following line:

```
\setlength\cftparskip{.3em}
```

and change the `.3em` to whatever suits your fancy.

What if I want to hide the page numbers and/or trailing dots next to the question in the list of questions?

To remove the trailing dots to the page numbers, find the line:

```
%\renewcommand{\cftdot}{}

and uncomment it. To remove the page numbers as well, find the following lines and uncomment them:
```

```
%\let\Contentsline\contentsline
%\renewcommand\contentsline[3]{\Contentsline{#1}{#2}{}}
```
