special ones are highlighted in the timetable. A full list of abstracts follows and displays information about each talk including authors, affiliations and examples of including references.

Posters can be output in the same style of abstracts, or alternatively as a compact list with just titles, authors and affiliations. A list of participants is available and can be used to list all attendees of the conference as a quick reference. Finally, housekeeping information and sponsors are listed at the end.

The conferencebooklet Class

Newest Templates

LaTeX Typesetting Service

The conferencebooklet class supplied with the template defines the structure and layout of the template. If you would like to make changes to the template, it is recommended to find the relevant code in the class and redefine it in the template. For example, if you would like to change the colours, you would navigate to the COLOURS block in the class and find that the colour you are interested in changing is called `myblue`. You would then copy the definition from the class into the template and change the RGB values to suit your liking without modifying the class.

Compilation

This template should be compiled with standard pdflatex.

Custom Commands

The template largely uses standard LaTeX commands and environments for creating the layout of the booklet. This section explains a few custom commands that are used to make entering booklet content simpler.

The abstract for each day is created in

a table that can be split across pages. The rows within the table are created using custom commands to simplify adding entries for each day.

LaTeX Typesetting Service

The `\tablebreak` command is for conference breaks or conference administration and takes 2 arguments. The first is for the time of the break and the second is for the description.

The `\eventtype` command is used for conference events, such as the poster session and conference dinner. This command takes 2 arguments, one for the time of the event and the second for the description.

The `\KL`, `\IS`, `\CT` and `\IT` commands are used for keynote lectures, invited speakers, contributed talks and invited talks, respectively. Each command takes 4 arguments: 1) the time of the talk 2) the speaker 3) the speaker's institute or country 4) the title of the talk.

Abstracts

Each abstract is created using the `\abstract` command. This command takes 5 arguments: 1) the title

the abstract needs to be tagged as a keynote lecture (`\KLtag`), invited speaker (`\ISTag`), contributed talk (`\CTtag`) or invited talk (`\ITtag`) 4) the affiliations of the author(s) 5) the abstract text. The template includes examples of how to include references within the abstract text argument and a handy blank template for new abstracts at the top of the abstracts block.

Poster Abstracts (compact)

Poster abstracts are typically produced using the same `\abstract` command detailed above, but some conferences may wish to produce a compact list of posters instead. For this purpose, the `\poster` command is available. The command takes 3 arguments: 1) poster title 2) poster author(s) 3) author affiliation(s).
