

fphw Assignment

This template is for formatting assignments or homework in a clear and simple way. The title section at the top of the first page clearly displays the assignment, student and class information. This information also appears in the headers and footers of subsequent pages. Questions in the assignment are clearly demarcated and appear inside boxes to focus attention. The template features examples of including images, tables, equations and code listings for covering virtually all common assignment information. Multi-part questions and answers are shown for more complex questions.

Homework #1

Student name: Felipe Portales-Oliva

Course: *Special Relativity (Physics 301)* – Professor: *Dr. Albert Einstein*
Due date: *March 28th, 2025***Question 1**

What is the airspeed velocity of an unladen swallow?

Answer. While this question leaves out the crucial element of the geographic origin of the swallow, according to Jonathan Corum, an unladen European swallow maintains a cruising airspeed velocity of **11 metres per second**, or **24 miles an hour**. The velocity of the corresponding African swallows requires further research as kinematic data is severely lacking for these species.

Question 2

How much wood would a woodchuck chuck if a woodchuck could chuck wood?

- (a) Suppose “chuck” implies throwing.
(b) Suppose “chuck” implies vomiting.

Answer.

- (a) According to the Associated Press (1988), a New York Fish and Wildlife technician named Richard Thomas calculated the volume of dirt in a typical 25–30 foot (7.6–9.1 m) long woodchuck burrow and had determined that if the woodchuck had moved an equivalent volume of wood, it could move “about **700 pounds (320 kg)** on a good day, with the wind at his back”.
