

Bezos Business Card

This business card features a clean modern design with two columns separated by whitespace. The left column prominently displays your name, job title and company while the right column is used for contact information.

Description

This business card template aims for a clean modern look through its use of the Raleway sans font and clean layout in two columns. Your name, job title and company are prominently displayed in the left column while the right column contains plenty of space for your contact information.

Compilation

Newest Templates

LaTeX Typesetting Service

This template compiles with standard pdflatex. There are no special requirements outside of packages that are supplied with a full distribution of TeX.

Output Your Name, Job Title and Company

Your name, job title (position) and company or department are output within the left column in a `minipage` environment. Simply change the template example information with your own and adjust font sizes and spacing as needed. You can also remove unneeded lines or add new ones.

Output Contact Information

Your address is output within the right column in a `minipage` environment. Simply enter multiple lines separated by newlines `\\` and adjust the font size and spacing as needed. If you don't want to output your address, remove the address lines and the vertical whitespace below.

contains a very short identifier for the contact information type, e.g. `e.p` for an email address. It is recommended to keep the identifier to no longer than 4 characters and to use the same number of characters for the identifiers on each line. The contact information for each identifier is then simply output to the second column of the table.

Business Card Sizes

Business card sizes vary widely across countries. The template is written in such a way that the content will automatically distribute itself no matter what paper size is used. At the top of the template file are all the major business card sizes that exist in the world, each commented with the countries it is used in. Simply find your country or standard and uncomment the relevant line to set the `paperwidth` and `paperheight` accordingly.

Adding a Crop

You may need bleed space around your business card for paper cropping purposes. The template accommodates this by providing an example using the `crop` package. Uncomment the code for this package at the top of the

between the paper specified for cropping and the size of the business card itself will be indicated by crop marks in the resulting document, such as shown in the preview images.
